

LIBERTY SWING PHOTO IMAGES OF INSTALLATION OPTIONS

Here are some images of installations showing various combinations for surfacing and fencing (barriers). Email sales@libertyswing.com.au for more information

Location:
St Albans Park, Herts, UK

Note hedging and mesh fencing. This swing has been installed, without incident since 2003. Note: This park is locked at night.

As above This image is a good example of a well blended playground – the Liberty Swings’ inclusively’ amongst other play equipment, separated by hedges and mesh barriers.

HEDGES MAKE GREAT BARRIERS! And they’re cost efficient too.

Location: Nancy, France
Note hedging and wooden barrier

This is a lovely installation. However, the large area may entice additional traffic in the enclosure, posing a safety risk. Initially, installed without a gate, the Council retrospectively removed a drink fountain and installed a gate for this reason. Note the raised softfall area for the ramp.

Left:

Use of the 1500 mm fence height, with the small area can look 'cagey'. The manufacturer now recommends 1200 mm fence height, particularly for smaller areas.

BELOW: One of our favourite installations. Note the mixed surface treatments: wetpour rubber, tanbark and pebble mix. Same fence as playground perimeter and well integrated into total playground. Well done Ric McConaghy P/L!
